Project Title	AI-WeatherWise
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	To develop a backend API that retrieves real-time weather data and provides useful AI-based weather insights to users.
Scope	Develop a RESTful backend using Node.js and Express.js, integrate a Weather API, process weather data, and store relevant data using MongoDB.
Problem Statement	
Description	Users often face difficulty accessing accurate and real-time weather information. Weather data from different sources may be difficult to understand, and sudden weather changes can affect daily planning and travel.
Impact	Providing reliable, real-time weather information with AI-based insights can help users understand weather conditions quickly, plan activities effectively, and make informed decisions.
Proposed Solution	
Approach	Developing a backend-based weather system using Node.js and Express.js to retrieve real-time weather data from an external Weather API, process the data, and provide AI-based weather insights.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU specifications	Intel Core i5 / equivalent processor
Memory	RAM specifications	8 GB
Storage	Disk space for application, database, and logs	256 GB SSD
Software		
Frameworks	Backend framework	Node.js, Express.js
Libraries	Additional libraries	Axios, Mongoose, dotenv, CORS
Development Environment	IDE / Tools	Visual Studio Code, Thunder Client
Data		
Data	Source, size, format	Third-party Weather API, JSON format
