

## Solution Architecture

|                      |                          |
|----------------------|--------------------------|
| <b>Date</b>          | 29 September 2026        |
| <b>Team ID</b>       | 6ab4cf016603573ccfb54f03 |
| <b>Project Name</b>  | AI-WeatherWise           |
| <b>Maximum Marks</b> | 5 Marks                  |

### Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

## Component Description Table

| Component Name     | Description / Role in Architecture                                                                              | Technologies Used          |
|--------------------|-----------------------------------------------------------------------------------------------------------------|----------------------------|
| Presentation Layer | Allows users/developers to send requests to the backend API and view weather responses.                         | Thunder Client / Postman   |
| API Gateway        | Receives client requests, routes them to the appropriate backend logic, and sends responses back to the client. | Express.js                 |
| Microservices      | Handles weather data retrieval, processing, AI-based weather analysis, validation, and business logic.          | Node.js, Express.js, Axios |
| Database           | Stores relevant weather and application data for retrieval and future use.                                      | MongoDB, Mongoose          |
