Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	YES
2	README / Setup Guide (instructions to run the project)	YES
3	requirements.txt / package.json / dependency file	YES
4	Database schema / seed files (if applicable)	YES
5	Environment configuration file (.env.example or similar)	YES
6	Deployed application URL (if hosted)	NO
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	YES
10	Demo video or walkthrough (if required)	NO

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not deployed / N/A
Login Credentials (Demo)	N/A – No authentication implemented
Platform / Hosting Provider	N/A
Repository Link	https://github.com/santhoshbca02/AI-WeatherWise-API
Demo Video Link	https://drive.google.com/drive/folders/19w0zPAPmK9RcHNIPDJP9V-BN2MNNWVXs?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Install **Node.js v18 or above** and npm.
- Download or clone the **AI-WeatherWise-API** project from GitHub.
- Open the project folder in **Visual Studio Code**.
- Open the terminal and run:

```
npm install
```

- Create a **.env** file in the project root directory.
- Add the required **MongoDB connection string** and **Weather API key** in the **.env** file.
- Start the development server using:

```
npm run dev
```

- The backend server will start locally.
- Use **Thunder Client** or **Postman** to test the available API endpoints.
- Send requests with the required location/input and verify the weather API responses.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Weather data depends on the availability of the external Weather API.	Proper error handling is implemented.
2	Internet connection is required to fetch real-time weather data.	User should ensure a stable internet connection.
3	AI-generated insights depend on the quality and availability of the weather data.	Weather data is validated before processing.
